

**Subject:** Code Retrieval/Clearing

**Model:** 1998 Chrysler FJ Sebring, Dodge FJ Avenger, Eagle FJ Talon

**Condition:** The ABS Diagnostic Trouble Codes ( DTC) can be accessed by Grounding pin 1 of the 16 – way connector, OR THE USE OF A SCAN TOOL. The amber warning light can be used to display the DTC.

**Procedure:** Involves grounding pin 1 of the 16-way data link connector and reading or erasing ABS trouble codes.

1. Using a jumper wire, ground pin 1 of the 16-way data link connector. See Fig 1.

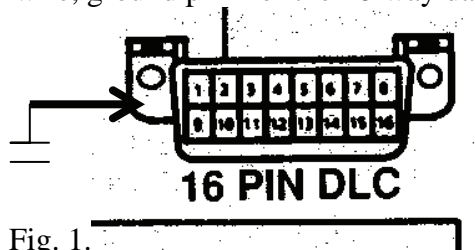

Fig. 1.

2. Turn the ignition switch to “on”. The diagnostic trouble codes will begin to flash on the amber ABS warning lamp. The first digit of the code will be represented by slow flashes, and the second digit will be represented by quick flashes.
3. The diagnostic trouble code can be erased by turning the ignition switch to “ON” while the brake pedal is depressed. The data link connector pin 1 must be grounded. **Quickly** operate the brake pedal **10 times in succession**.. After the code is erased, the ABS warning light will flash quickly and continuously.

**Note:** The DTC CANNOT be erased if the stop lamp switch (Brake pedal) is not turned on and off quickly.
